

# Offshore Project

## Case study

### Project brief:

To provide a transport solution to include a charter vessel for an Offshore Project.

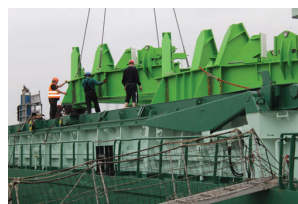

ALS colleagues arranged to charter a coaster vessel for 12 steel constructions 'grillages' totalling 240 tons, which were successfully shipped from Szczecin, Poland.

Discharging took place in The Netherlands.

ALS colleagues attended and oversaw port operations in both ports.

This project is part of The Hornsea Offshore Project in the UK.

For more check the ALS website for our capabilities in the renewables sector
